

CABLE HOUND®

CABLE/PIPE LOCATOR AND DEPTH INDICATOR

The Cable Hound® is an electronic device designed to accurately locate and determine the depth of buried cable or metallic pipe. Each Cable Hound® consists of a Transmitter, Receiver, Tone Probe, Ground Rod and Carrying Case. The unit may be ordered with a plastic or wood carrying case as illustrated.

The Transmitter, powered by eight "C" size batteries, is an integral part of the carrying case. It has two clip leads approximately 15 feet long used to electrically place the Transmitter between the ground rod and the cable shield or sheath. In addition the Transmitter features a control switch which selects whether a steady or warble tone is to be transmitted as well as a battery condition indicator.

The Receiver is a sensitive solid-state amplifier in a durable plastic housing. It is equipped with a 60 HZ filter to prevent AC induction as well as a battery condition indicator. The Receiver is powered by a nine volt battery and will reproduce a steady or warble tone.

The Tone Probe, encased in molded rubber, acts as a directional antenna which picks up the transmitted tone. In addition the unit has a bubble level for accurate depth determination. The Tone Probe is connected to the Receiver by a flexible, insulated, two wire cable.

ORDERING INFORMATION

MODEL NUMBER	CATALOG NUMBER	DESCRIPTION	HEIGHT	LENGTH	WIDTH	WEIGHT LESS BATTERIES
71-620-00	99-0116	Cable Hound in wood carrying case	4.13"	11.50"	5.50"	4.5 lbs.
71-620-10	99-0117	Cable Hound in plastic carrying case	3.62"	13.75"	10.12"	4.5 lbs.

A complete Cable Hound is shipped when the catalog numbers indicated above are specified. In addition component parts may be ordered as follows.

MODEL NUMBER	CATALOG NUMBER	DESCRIPTION	MODEL NUMBER	CATALOG NUMBER	DESCRIPTION
